## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Geza Ziegler on June 21, 2005.

The application has been amended as follows:

In the abstract, page 24, last line, "(Figure 5b)", has been deleted.

Claim 3, page 20, line 33, "connections", has been replaced with --connections.--

Claim 11, page 22, line 23, "length", has been replaced with --length.--

Claim 12, page 22, line 32, "context identifier a length is configured to be defined", has been replaced with --a length is configured to be defined for the context identifier--

Claim 14, page 23, line 20, "connections", has been replaced with -- connections.--

### ***Allowable Subject Matter***

2. Claims 1-15 are allowed.

3. The following is an examiner's statement of reasons for allowance: Claims 1 and 12 are allowable since prior art fails to disclose defining parameters of the connection in such a manner that the number of header fields of the data packet connections allowed

by the context identifier length, can be compressed despite exceeding the data packet connections allowed by the context identifier length.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

\*Jonsson et al. (US 6,754,231) discloses robust header compression in packet communications.

\*Agarwal et al. (US 6,859,442) discloses a method and system for transport of frame relay traffic over satellite/wireless networks.

\*Chuah (US 6,839,339) discloses header compression for general packet radio service tunneling protocol (GTP)-encapsulated packets.

\*Westbert (US 6,791,982) discloses segmentation protocol that supports compressed segmentation headers.

\*Jonsson et al. (US 6,700,888) discloses manipulating header fields for improved performance in packet communications.
